Course Objectives:

Explain the basic principles and procedures for determining the topographical features and calculated corrections to the fire control unit (PUO 9M).

Content:

- 1) Preparing equipment for fire control PUO – 9M
- 2) The main part of the device for fire control PUO – 9M
- 3) Control device PUO – 9 M
- 4) Orientation ruler to the main direction
- 5) Plotting the elements of a military deployment
- 6) Determination of topographic features on the device for fire control PUO – 9 M

1) Preparing equipment for fire control PUO – 9M

Procedure:

- case lay down a harness and handle together,
- open pouch and remove the device comprising grasping with both hands just above the horizontal arm,
- open upper half ruler (of 90 °) to the upright position by grasping the arm on the left side of the device,
- on the protractor to loosen the fixing screw (the curved part), turning left about $\frac{1}{4}$ and moving to the edge of the protractor (to himself) to remove him from the bed,
- open ruler (both halves in the horizontal position),

1) Preparing equipment for fire control PUO – 9M

Procedure:

- ruler locks ensure against closure (inserting and turning the lock of 90 °),
- lay the device on a horizontal surface ruler up,
- horizontal extension ruler:
 - loosen the fixing screw on sledges,
 - pulled out a ruler to $\frac{1}{4}$ upper part (apart) ruler,
 - use of the right side of the protractor on the horizontal ruler extension (for easier insertion lift the fence about 1 mm),

1) Preparing equipment for fire control PUO – 9M

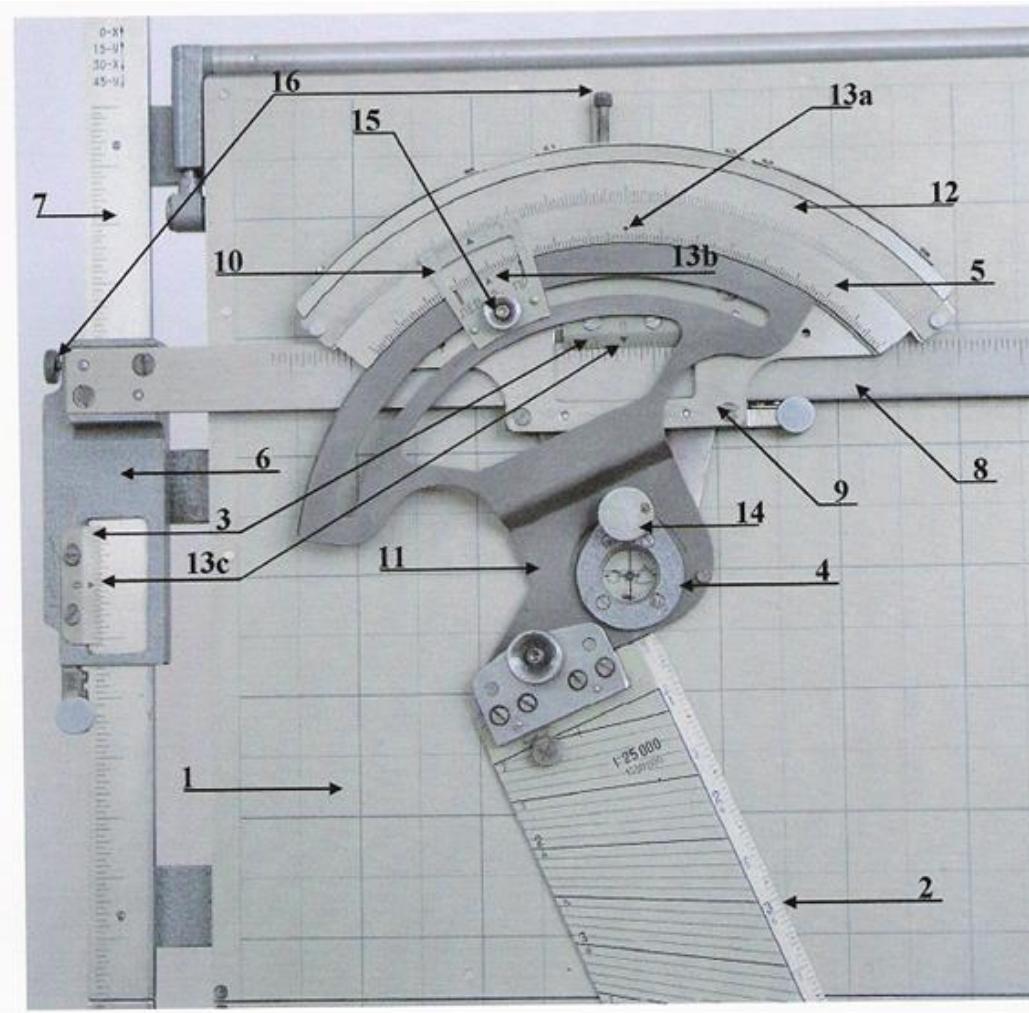

Procedure:

- removed from the housing district ruler (with graphical firing tables) grip in the middle right hand lifted about 5 mm and the pressure on the upper left-hand end of the eject him from capture,
- on the protractor to release the screw remote ruler (to the extreme position) and deploy remote holes in the fence taper pins,
- ruler to consolidate remote locking screw.

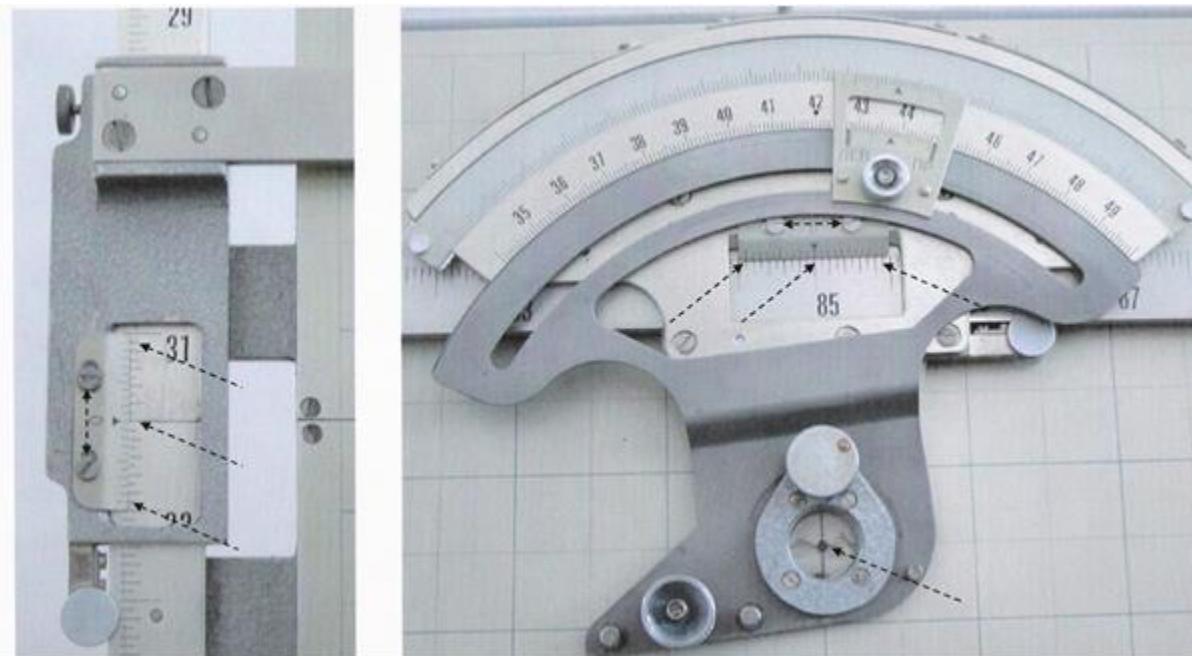

The main part of the device PUO – 9M are shown in Fig. 22.

To further clarify the true data from the example given in the paper 3.2.1.

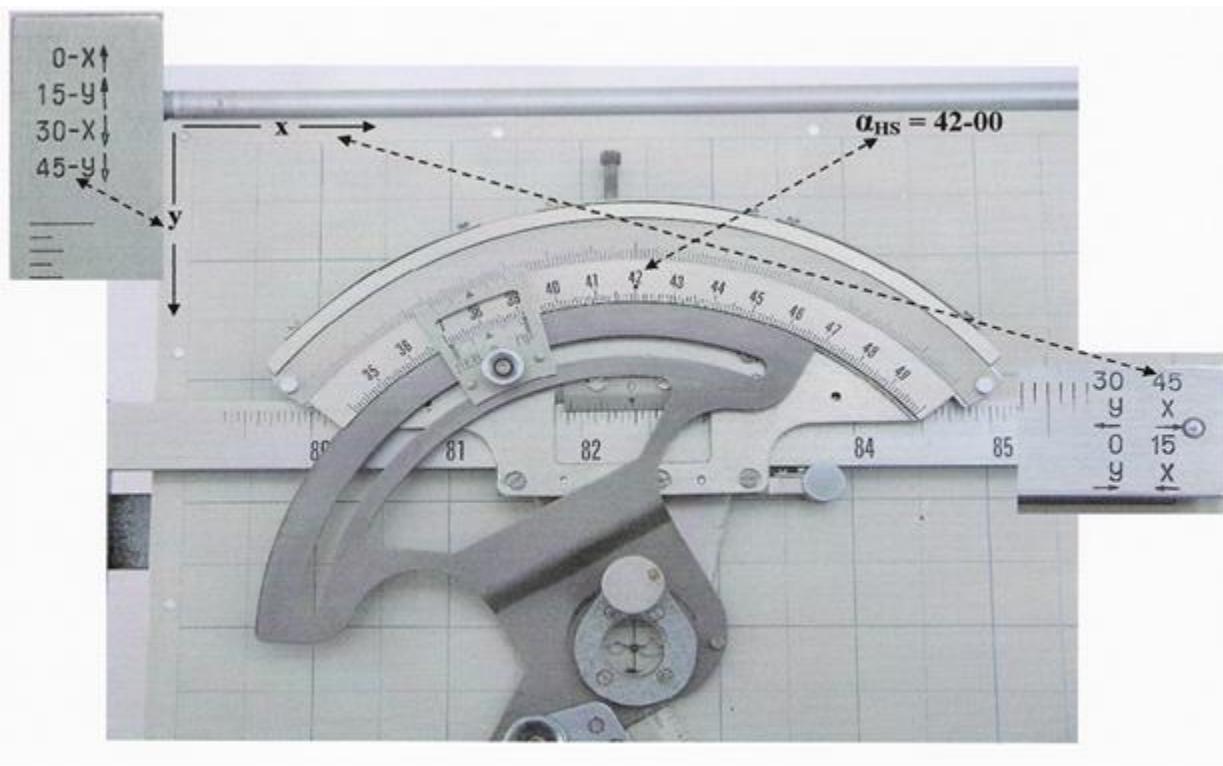

2) The main part of the device for fire control PUO – 9M

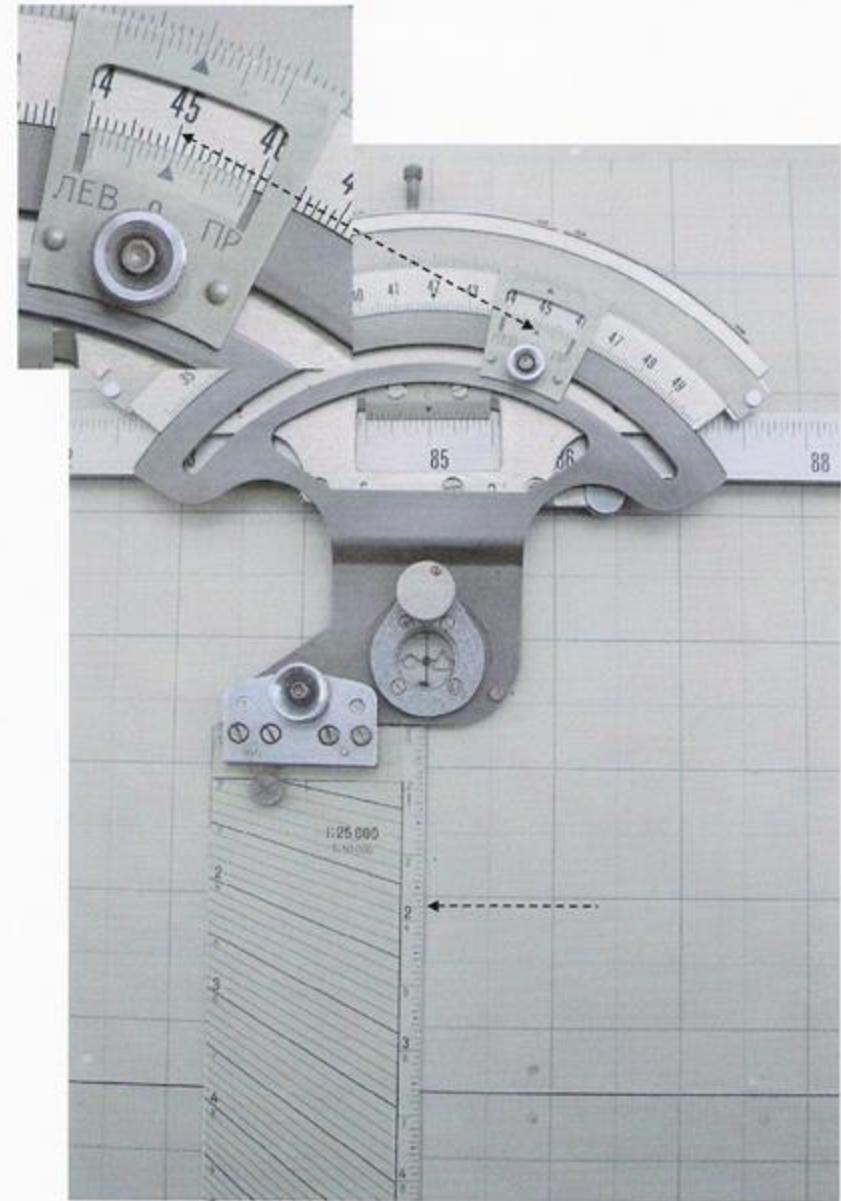

3) Control device PUO – 9 M

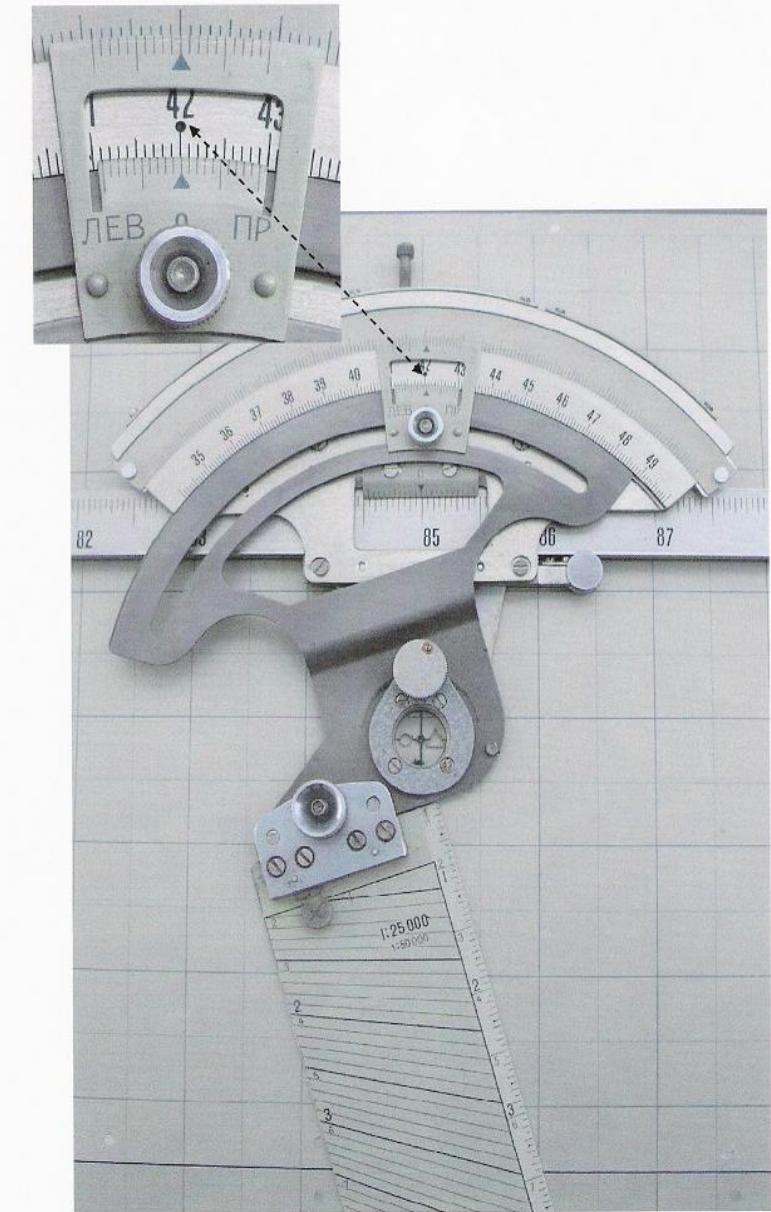

4) Orientation ruler to the main direction

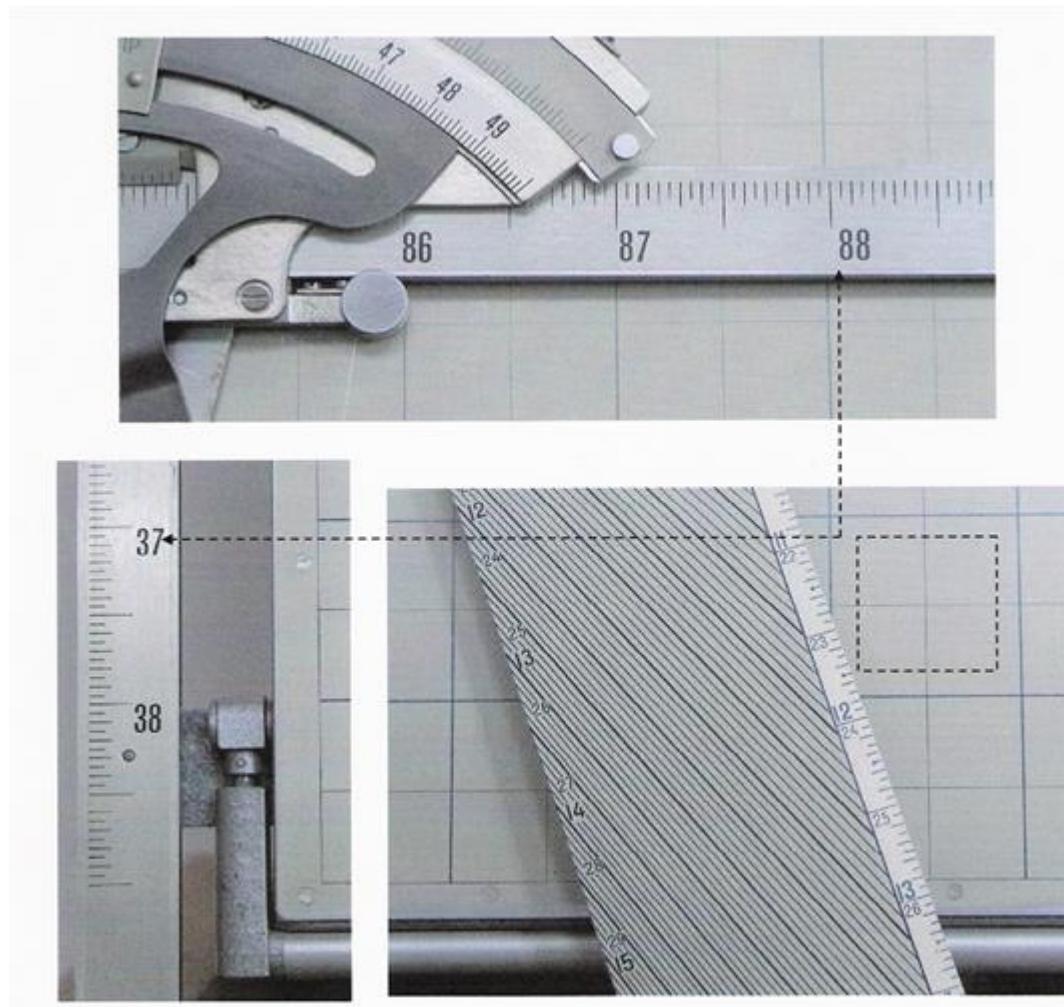

4) Orientation ruler to the main direction

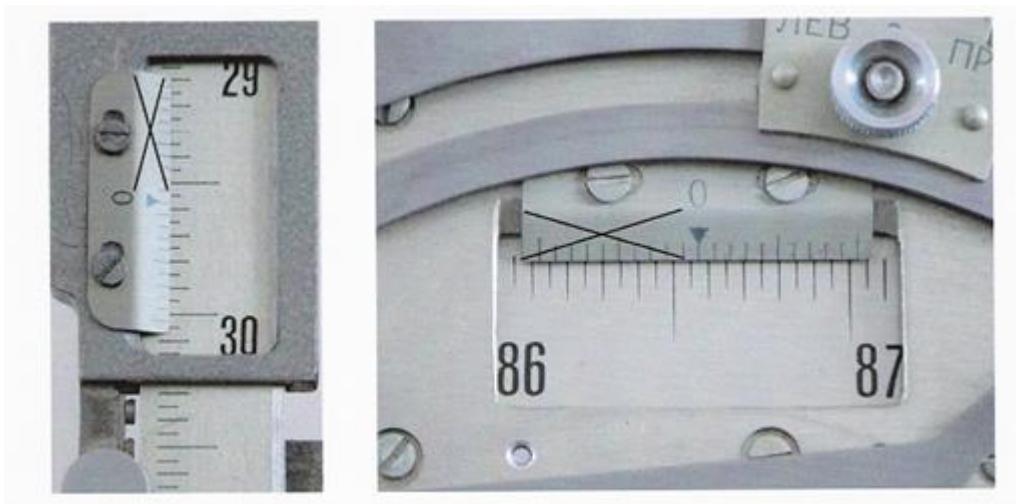

4) Orientation ruler to the main direction

4) Orientation ruler to the main direction

4) Orientation ruler to the main direction

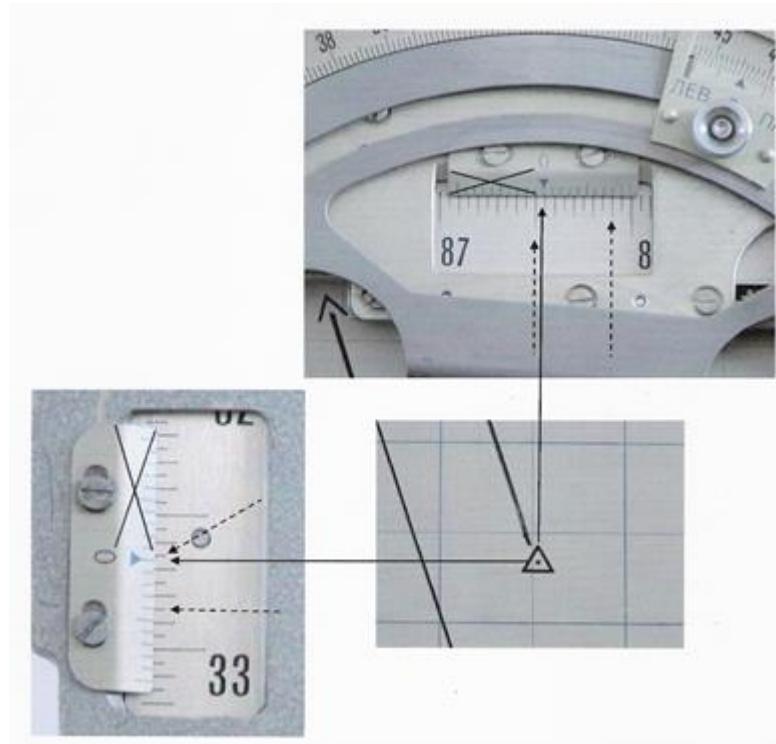

5) Plotting the elements of a military deployment

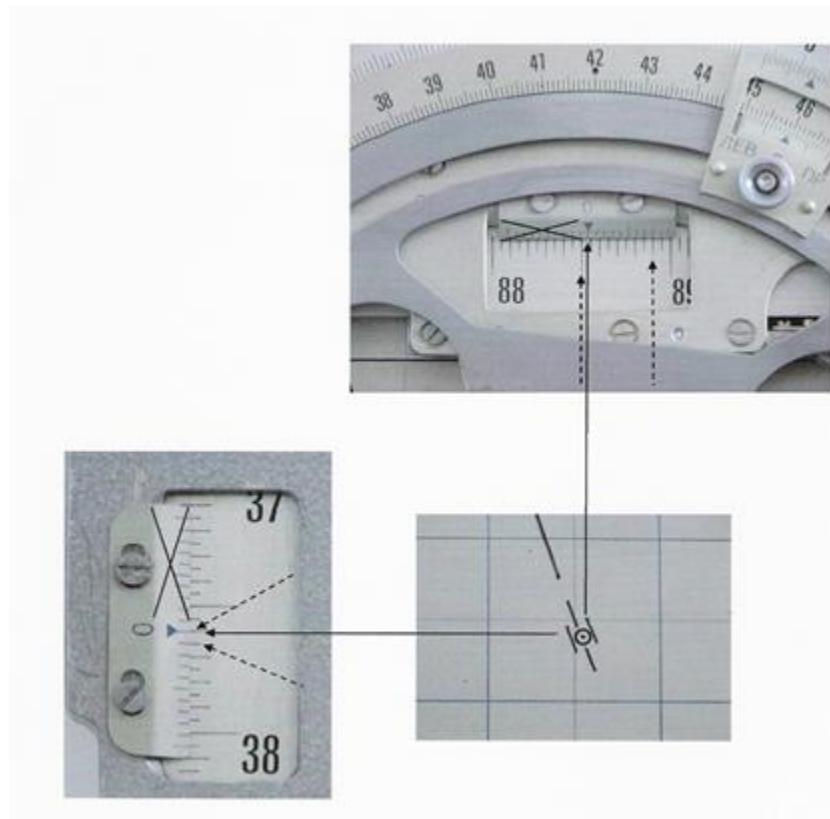

Coordinate delivery of the observation:

- coordinates N (X) observation:
 - identify the zero index Chip coordinates with the value 87 500 identify the zero index Chip coordinates with the value N (X) ,
 - at the scale 1 : 25 000 is a piece of noni to coordinate extension 5 m,
 - for the remaining 40 m true: $40 : 5 = 8$,
 - identify the eighth mark noni with the next line the discharging rulers,
 - total coordinate N (X) observation is 87 540.
- coordinates E (Y) observation:
 - identify the zero index Chip coordinates with the value 32 650 mark on the ruler staging axis E (Y),
 - for the remaining 20 m true: $20 : 5 = 4$,
 - identify the fourth mark noni with the next line the discharging ruler,
 - total coordinate E (Y) observation is 32 670.

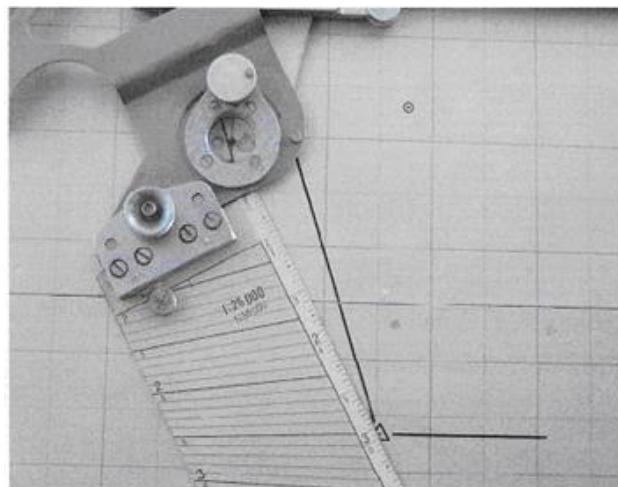

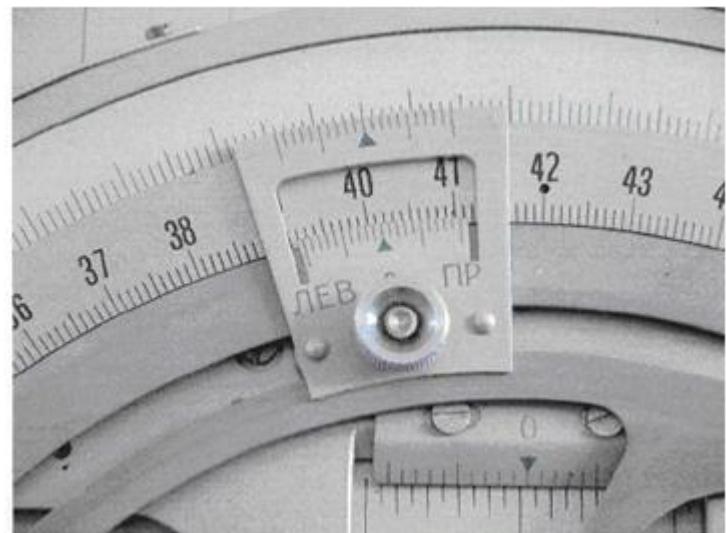

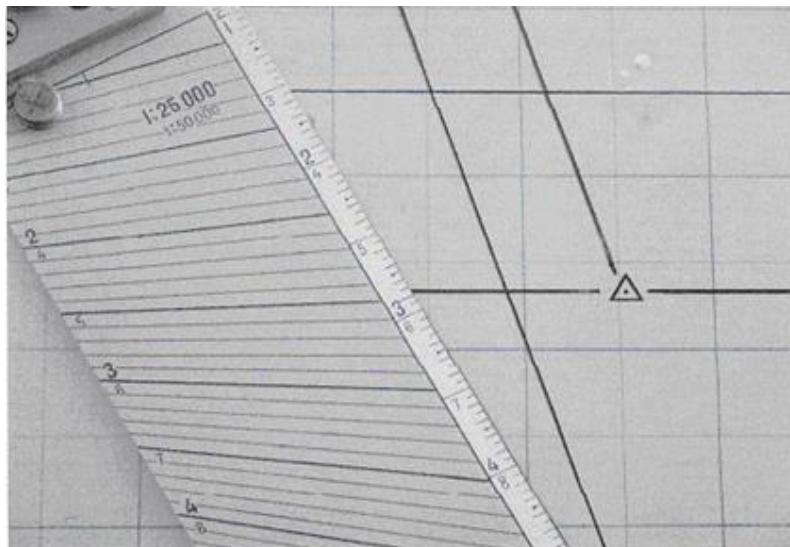

5) Plotting the elements of a military deployment

5) Plotting the elements of a military deployment

5) Plotting the elements of a military deployment

6) Determination of topographic features on the device for fire control PUO – 9 M
